### Introduction to Differential Equations

Differential Equations Summary 1. Basic Differential Equations 1.1 First order equations 1.1.1 Basic form Equations containing derivatives are differential equations. Differential equations of the first order (meaning only first derivatives can occur, but no second or higher derivatives) can be written as  $dy/dt = y_0 = f(t,y)$ . (1.1.1)

PARTIAL DIFFERENTIAL EQUATIONS SERGIU KLAINERMAN 1. Basic definitions and examples To start with partial differential equations, just like ordinary differential or integral equations, are functional equations. That means that the unknown, or unknowns, we are trying to determine are functions. In the case of partial differential equa-

A differential equation (de) is an equation involving a function and its derivatives. Differential equations are called partial differential equations (pde) or ordinary differential equations (ode) according to whether or not they contain partial derivatives. The order of a differential equation is the highest order derivative occurring.
