Pain is usually transitory, lasting only until the noxious stimulus is removed or the underlying damage or pathology has healed, but some painful conditions, such as rheumatoid arthritis, peripheral neuropathy, cancer and idiopathic pain, may persist for years. Pain that lasts a long time is called chronic or persistent, and pain that resolves quickly is called acute.

### **Pain - Wikipedia**

Gastritis is inflammation of the lining of the stomach. It may occur as a short episode or may be of a long duration. There may be no symptoms but, when symptoms are present, the most common is upper abdominal pain. Other possible symptoms include nausea and vomiting, bloating, loss of appetite and heartburn. Complications may include bleeding, stomach ulcers, and stomach tumors.

**INTRODUCTION.** Bipolar disorder is marked by episodes of mania and hypomania (), and nearly always includes episodes of major depression []. Despite clinical differences between manic and hypomanic episodes, for the purpose of treatment they are considered to be similar and thus treated with the same medications []. This topic reviews pharmacotherapy for acute mania and hypomania in adults.
