Power-system protection is a branch of electrical power engineering that deals with the protection of electrical power systems from faults through the disconnection of faulted parts from the rest of the electrical network. The objective of a protection scheme is to keep the power system stable by isolating only the components that are under fault, whilst leaving as much of the network as ...

Power-system protection - Wikipedia

Course Description: This course is intended to prepare the target persons with the ability to perform Generator Sizing Calculations.
