STRUCTURAL STEEL DESIGN AND CONSTRUCTION

Alloy steel: A generic term for steels which are alloyed with elements other than carbon. Why alloys? The mechanical behavior iron is changed hugely by the addition of carbon and other additives (or alloys). 8 Types of steel used in construction Structural steel"plates, bars, pipes, structural shapes. Chapter 2: Fundamentals of the Heat Treating of Steel / 11 Steel, however, is by far the most widely used alloy and for a very good reason. Among laymen, the reason for steel's dominance is usually considered to be the abundance of iron ore (iron is the principal ingredient in all steels) and/or the ease by which it can be refined from ore ...

Carbon steel is steel that has properties made up mostly of the element carbon, and which relies upon carbon content for its structure. The most perfect carbon structure in the world is a diamond, which is 100% carbon. Carbon is present in all steel and is the principal hardening element, determining
